

MAGICFETCH APP – PRESENTATION SCRIPT

INTRO

Good day, sir. I'll be giving a brief summary of the progress we've made so far on the MagicFetch app design project.

1. Project Overview

MagicFetch is designed to make item-request and delivery faster, easier, and more organized for users and vendors.

2. Feature Breakdown

We first finalized our core features, including user authentication, home dashboard, request tracking system, basic vendor functions, and profile/settings management.

3. UI/UX Workflow

We selected a modern, friendly color palette with a primary purple theme, clean backgrounds, and signature accent color for CTAs.

We worked through the design step-by-step beginning with login, then home, request flow, and profile pages.

4. Branding

We created a brand direction document for the logo designer, focusing on a simple, clean, “magic-inspired” tech identity.

5. Current Status

Feature list: completed

Color palette: completed

User flow: completed

Wireframes: halfway done

UI design: ongoing

CONCLUSION

That's the progress we've made so far, and we are continuing with wireframes and high-fidelity UI next.
